

# Mask Stay

*Recreate the comfort of an N95's dome shape using recycled plastic*

.75" wide / 11" long approximately | fit to your mask

.75" wide / 2"-3" long

**Tired of a damp cloth mask slapping your lips as you inhale?**

Designed for use in a sewn-cloth mask

**Materials:** 1 gallon plastic jug

**Tools:** scissors, stapler.

- 1) Use this pattern to cut out the stay from a plastic bottle. I used a 1 gallon water bottle.
- 2) Fit the long ends to your cloth mask. Trim the ends to fit just inside the mask so that cloth, not plastic, touches your face.
- 3) Staple the ends with one or two staples, placed crosswise to the length of the stay.
